

Socio-economic Scenarios for Switzerland (SSP-CH) – Supplementary Material

2x2 Scenario Projections

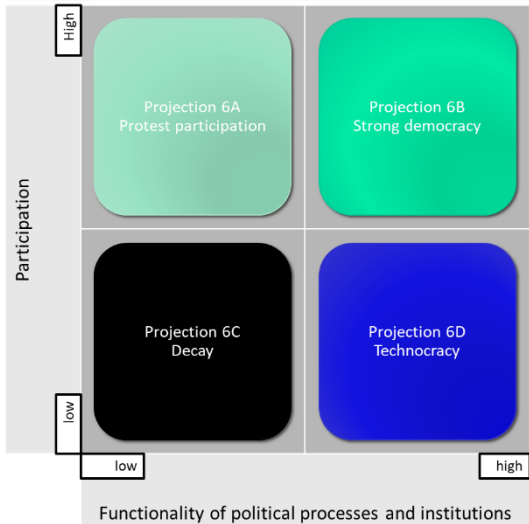

The following scenario projections are based on focus group discussions held in 2023 with 59 experts from 20 academic institutions in German-speaking and French-speaking Switzerland, which formed the basis for the consistency analysis and the raw scenarios. The authors are responsible for the text below. The projections were created using the 2x2 scenario technique, whereby the axes were first discussed and defined, and then the possible developments of the relevant factor were outlined and described. A detailed description of the factor projections is available in german only.

Key factor **5** **Economic development**
